**The World's First Player Market With  
Blockchain Infrastructure**

**It is created to win**

# TRANSFERLIST

## What Is Transferlist?

TransferList is a self-renewing, deflationary, automatic liquidity blockchain protocol which is concentrated on football players and fans. It is created using the Binance infrastructure. Transfer List is a social network that brings together football lovers and investors using blockchain technology and generate profit to its investors. TransferList transfers promising and profitable players. It aims to make a profit from the sale of these football players by contributing to their progress. It uses the %36 of the net profit to burn Transferlist token. In this way, the token price gains positive value.

10% deduction is applied to every transaction made with TransferList.

## Liquidity Pool :

5% of each transaction is automatically transferred to the locked liquidity pool. This provides an ever-growing liquidity. In this way, a lower price volatility and a positive price floor are created.

## Transfer Fund:

3% of the transactions are transferred to the fund to be used for the transfer of players. With this fund, promising and profitable players can be transferred

in certain periods of the year. 36% of the net profit from the sale of these transferred players is used to reduce the token supply.

### **Rewarding :**

The 2% portion of each transaction is transferred to TransferList wallets. It is aimed to hold more tokens here. This effects the token price in a positive way.

### **Community – Focused :**

TransferList uses the universal language of football. It allows every individual to invest in players as much as they want. It doesn't matter \$1 or \$1,000. Not only that, it gives the right to vote for everyone who wants to support the project in the determination of these players. TransferList is a universal family.

### **Transparency and Trust :**

TransferList aims to be exactly transparent. It announces every transaction in advance with the principle of community-oriented work. TransferList has a continuity feature because it takes its source from football players. This provides a positive increase in the locked liquidity pool and the burning address.

## **TRANSFERLIST TOKEN**

**- Contract Address : 0x59ff4e842fc50bef15ea77e464b46a610846fa01**

**- Maximum Supply : Consists of 1 000 000 000 000**

**- Total Supply : % 30 ( 300 Billion )**

**- Total Liquidity: %15.6 ( 156 Billion )**

**- Burned : % 28.2560 ( 283 Billion )**

**- Other Exchange Liquidity : % 10 ( 100 Billion ) ( Locked for 10 Months )**

**Monthly periods will also be used to enter new exchanges.**

**- Football Club : % 7 ( %4 Locked for 18 Months ( 40 Billion ) %3 Locked for 6 Months ( 30 Billion ) )**

**- Promotion and Project Development : % 3 ( 30 Billion )**

## **PROJECT PROCESSING STAGES**

- TransferList is processed between 23 August and 30 August on the **DXSALE** platform with a request between 150 and 300 Bnb for 51.5 % of it.
- After the requested amount of Bnb is collected, it starts to be treated on the **PANKEKSWAP** Exchange within the first three business days.

35 % of the collected **Bnb** is cut by TransferList to be used in the establishment of footballers tracking teams, agreements with private footballers tracking organizations, incorporation, smart contract control certificate purchase and project promotion. The remaining 65 % is treated on the **PANKEKSWAP** exchange as liquidity.

- Then, the smart contract control certificate is obtained first.
- Coinmarketcap and Coingecko memberships are done.
- A team responsible for player transfers is created .

First of all, it creates a scout team in its own structure to determine and follow up the players to be transferred. It works with private organizations such as **"Trscouts, Wyscout, Scoutium, Scouting System"** that have wider monitoring and follow-up opportunities to work interrelating with this team.

- When the targeted transaction volume is reached, the players are transferred first.

- TransferList aims to buy football clubs in Netherlands, Belgium, Spain and England, . According to the expected TransferList token transaction volume in the medium term, it aims to purchase a football club with a high potential in the Netherlands in the second quarter of 2022. It then aims to make the purchase with the same policy, first in Belgium, then in Spain and finally in the UK.

### **Mission and Vision :**

**Mission :** TransferList brings new talents to football, allowing football fans to invest in these talents individually. In this way, it aims to enable football lovers to profit from these players.

**Vision :** As the TransferList family, to have clubs in at least four leagues of European football and to do 5% of the transfers in the continent through these clubs.

## **TRANSFERLIST PROJECTS**

Transfer List aims to bring clubs and players to the virtual environment through blockchain technology. It tries to achieve this with two different projects.

## **1. TransferList Token :**

The Transferlist token allows any individual or organization anywhere in the world to invest football players the amount of they want. 3% of every transaction made with the TransferList token is accumulated in the transfer fund to be used in the transfer of promising and profitable players. The players to be transferred are determined by using the lists of promising players from private professional player monitoring organizations FIFA and UEFA and the reports of TransferList's own player monitoring team.

Players whose transfers are positive as a result of the reports continue their football lives in the clubs that are agreed or owned by TransferList. All costs of transferring these players are shared with the investor on a regular basis.

In a football year, approximately 4 billion dollars are paid for player testimonials in European Football. As TransferList, we aim to take place 5% of this market.

## **2. Transferlist.co**

Established as a TransferList initiative, this address aims to provide clubs with lower costs and time savings. Every club that is a member of **Transferlist.co** will have the opportunity to sell and rent the players online. In this way, they will reach more potential buyers. Only member clubs can access the player information on Transferlist.co. It is not possible for third person to access information about these players.

**TransferList aims to make agreements with football clubs in the Professional First and Second Leagues of Latin American Countries, African Countries and some countries in the Middle East, especially European leagues. It offers these clubs this service free for two years.**

**TransferList offers not only football clubs, but also individual coaches and players whose contracts expire to develop their coaching teams, and the opportunity to reach more people. 15% net income of transferlist.co is used to introduce the TransferList token.**

### **3. Special Player NFT :**

**Transferlist plans to release NFTs of special moments from potential superstar players.**

### **4. Football Club Token Fan : ,**

**Transferlist creates the fan tokens of the clubs it buys. Priority is given to transferlist investors in the sale of these tokens.**
